Google Cloud

Design and Manage Oracle Workloads on Google Cloud Demo

Proprietary + Confidential

Module outcomes

01 Describe the architecture of a Retrieval-Augmented Generation (RAG) application that uses Oracle.

02 Explain how Oracle Database@Google Cloud can be used as a vector store for semantic search.

03 Differentiate the roles of embedding and generative models in a Vertex AI application.

04 Identify how Cloud Run and Google Maps Platform serve the application logic and visualize data.
