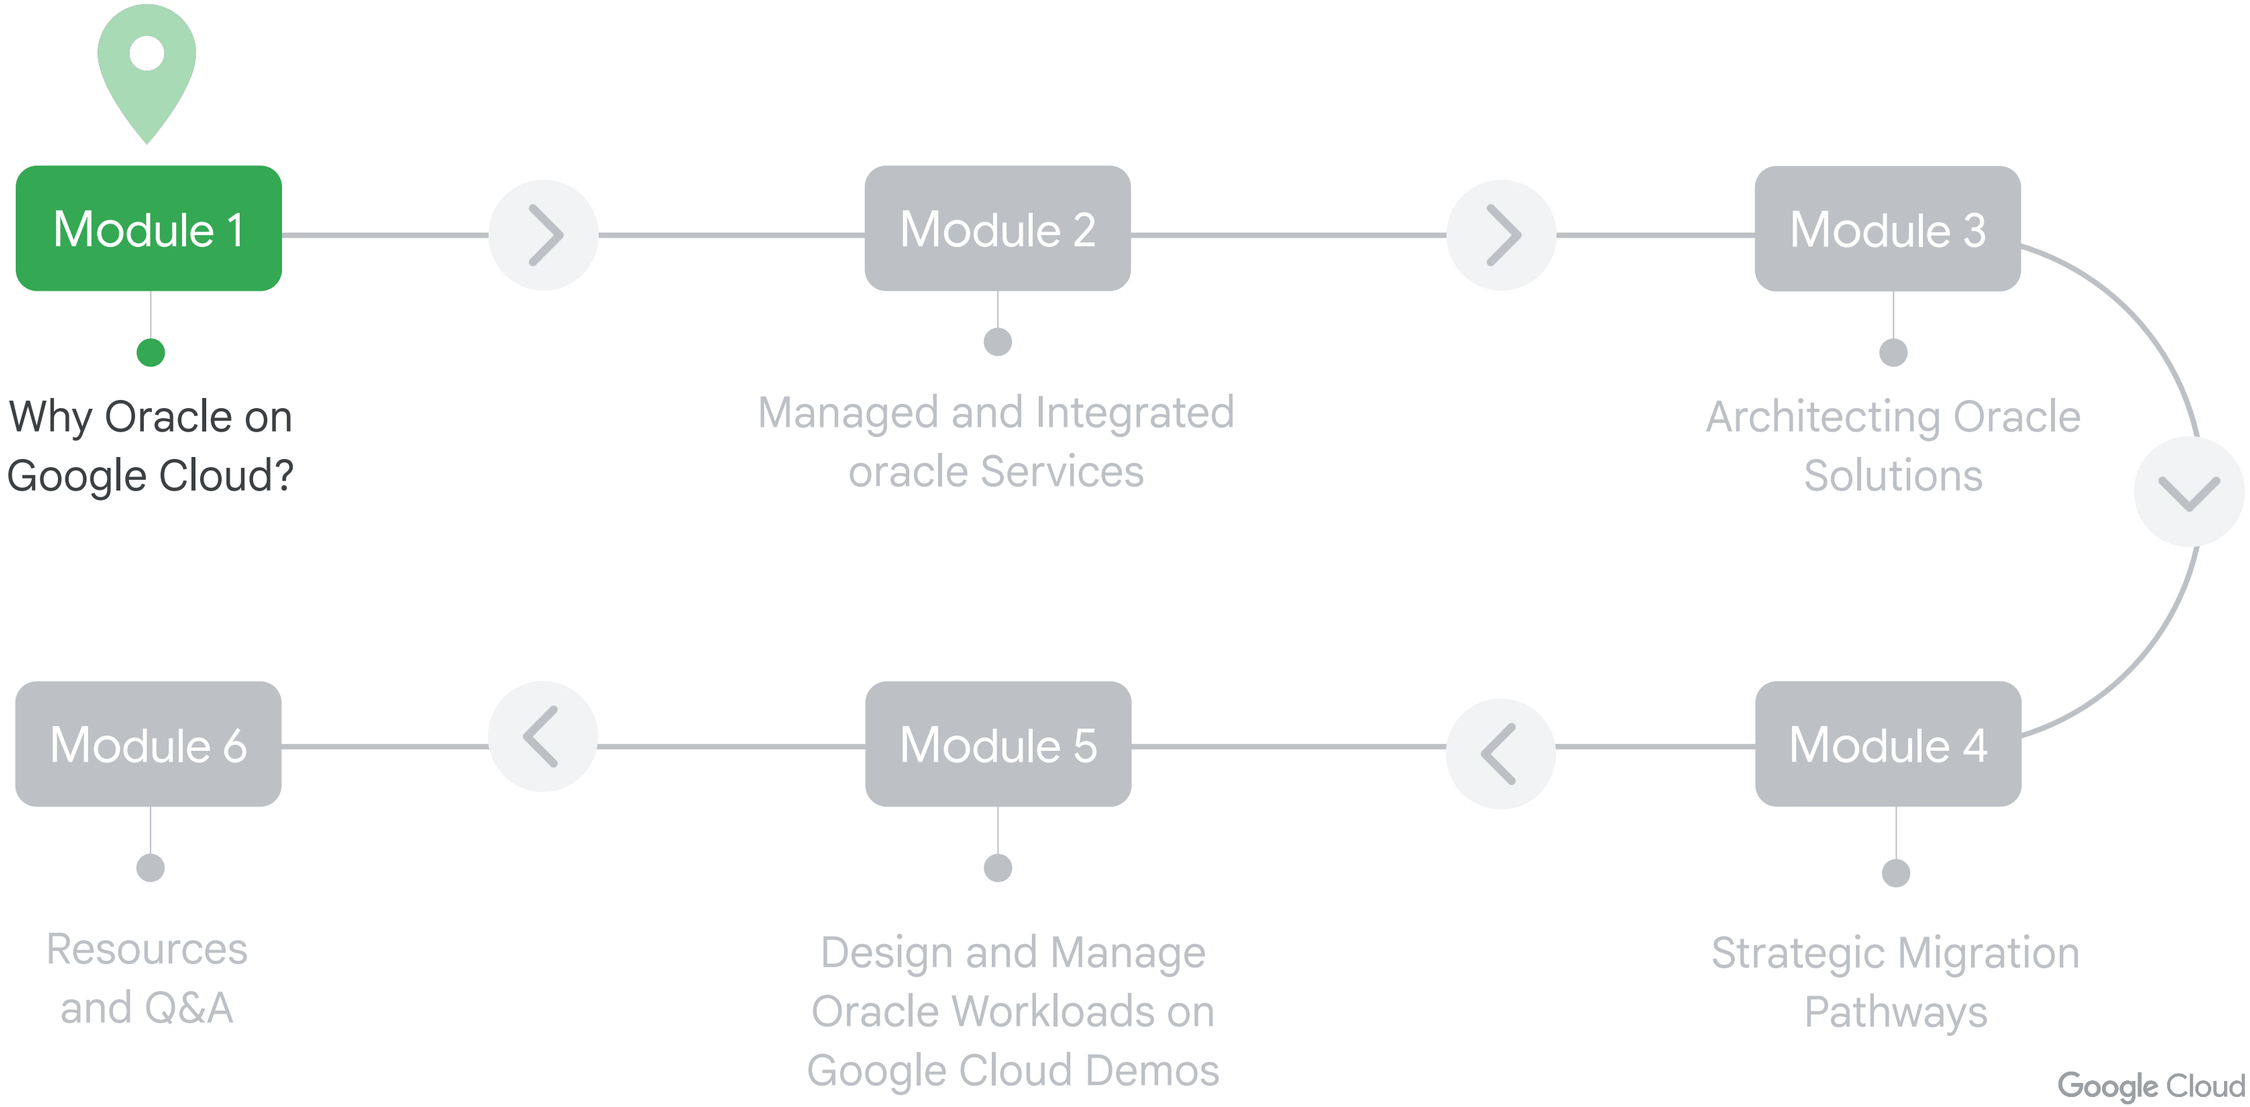
Google Cloud

Why Oracle on Google Cloud?

Proprietary + Confidential

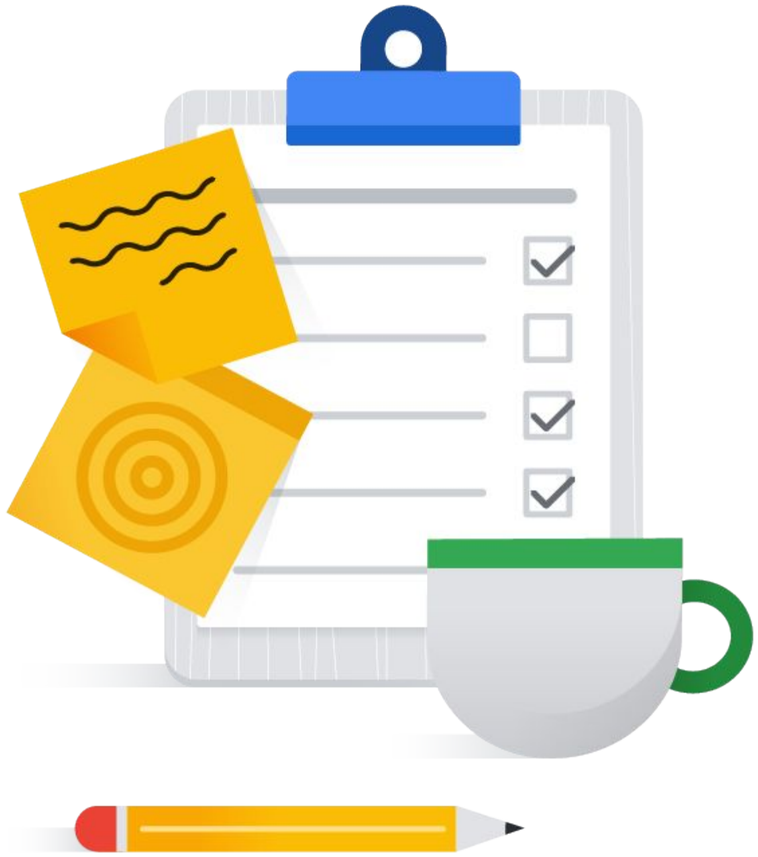
Where are you in your learning journey?



Proprietary + Confidential

Topics

01	Designing and managing Oracle Workloads on Google Cloud introduction
02	The partnership



Proprietary + Confidential

Module outcomes

01 List the benefits for running Oracle on Google Cloud.

02 Identify obstacles to deliver AI-driven transformation.

03 Describe how to enhance innovation for Oracle customers.

04 Examine the Google Cloud and Oracle partnership and offerings.

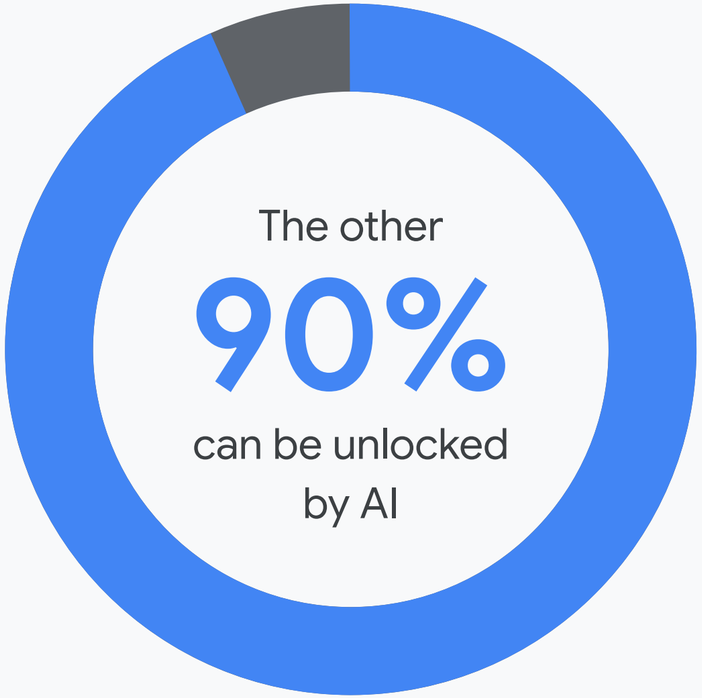
01

Designing and managing Oracle workloads on Google Cloud introduction

Proprietary + Confidential

Why now?
Enterprises today can typically access only 10% of their data



?

What opportunities are waiting to be discovered for your business?

Proprietary + Confidential

Achieving an AI-driven transformation

What are the common blockers from achieving an AI-driven transformation?

Legacy & Data Constraints

Siloed, aging, fragmented data and technology systems

Innovation & Cost Bottlenecks

Hesitation to make AI investment, limited by existing budget

Security Risks & Compliance

Complexity involved in migrating legacy systems to cloud

Proprietary + Confidential

The Vision

An Intelligent, Agile Enterprise

Security and governance

Could you be even more prepared for the unexpected (i.e. cyberattacks, risks and outages)?

Faster innovation

What if you could turn your Oracle business data into a true competitive advantage?

Simplified operations

How much time would you save your teams with a unified customer experience across purchasing, billing, and support?

Proprietary + Confidential

Unlocking the full potential of the intelligent enterprise

ORACLE

- Database leadership
- Enterprise solutions
- ERP
- CRM
- Ecosystem

Capabilities

- Access to the best of both Google Cloud and Oracle Database
- One integrated system
- Cost optimization
- Robust security
- Seamless data movement

Google Cloud

- AI leadership
- Data analytics
- Industry solutions
- Open ecosystem
- Sustainability

Proprietary + Confidential

Bringing innovation to Oracle customers with Google Cloud (1 of 3)

Up-level Oracle systems and apps

- Utilize Google Cloud innovative services on existing Oracle investment
- Build new cloud-native applications, leveraging strengths of both platforms
- Evolve DevOps with automation and cloud microservices

Proprietary + Confidential

Bringing innovation to Oracle customers with Google Cloud (2 of 3)

AI-enable your Oracle Database workloads

- Integrate real-time transaction data for proactive insights and AI-driven interactions
- Analyze OLTP data alongside other data sets to identify bottlenecks & inefficiencies
- Forecast trends/demand, to resource needs more accurately

Proprietary + Confidential

Bringing innovation to Oracle customers with Google Cloud (3 of 3)

Understand your customer, with accelerated insights

- Personalize customer experiences with a holistic view of operations+customer behavior
- Identify and Inform development of new features, products, or offerings that better meet customer needs
- Build richer customer profiles with structured+unstructured data

Proprietary + Confidential

Up-level Systems and Apps

Innovate Systems & Apps | AI-Enabled Workloads | Understand Customer

Migrate Oracle operational databases to Google Cloud, and help customers deploy and run Oracle **database services securely and with low latency**.

Use Cases

End-of-service software → Application modernization

Legacy hardware → Latest cloud infrastructure

Up-level app development with latest microservices

Value

- Facilitated migration
- Reduced costs due to improved hardware / cloud elasticity
- Enhanced security
- Amplify existing Oracle applications / simplify new app development
- Helps streamline procurement through Google Cloud Marketplace
- Remove “technical debt”

Proprietary + Confidential

AI-enable your Oracle Database workloads

Innovate Systems & Apps | **AI-Enabled Workloads** | Understand Customer

Empower your Oracle data with Google Cloud AI capabilities to **identify revenue opportunities, potential problems and reduce costs/time.**

Use Cases

- Frontend/democratize your Oracle data with AI agents
- Facilitate process work with AI (i.e. straight-through processing)
- Self-management, healing around platform management and ops (i.e. less toil, less overhead)

Value

- Stronger data security through database level A.I. posturing/analysis
- Automated business processes
- Faster identification of bottlenecks
- Enable greater self-service to employees, vendors and customers
- Uncover new insights enabling all your Oracle data with AI

Proprietary + Confidential

Understand your customer, with accelerated insights

Innovate Systems & Apps | AI-Enabled Workloads | Understand Customer

Utilize the latest data analysis capabilities with existing Oracle data to **identify opportunities, savings or threats.**

Use Cases

- Identifying trends across all data
- Enriched 360 degree view of customer (i.e. transactional, zip code/census data, segmentation)
- Enable “real time” business critical data analysis
- Utilize tools and marketplace to provide greater data cleansing/fidelity

Value

- Identify previously unknown opportunities/needs through analyzing all data
- Greater personalization
- Make ‘real time’ analysis possible through Google Cloud
- Scale and perform the most complex analysis in Google – greatest scale, fastest speed and lowest cost

Customers innovating with Oracle and Google Cloud across industries

StubHub

Now able to scale hardware up and down to meet constantly changing demands, benefitting from a far more cost-effective solution while experiencing **+64%** higher performance

Up-level Oracle systems and apps

dun & bradstreet

Can now **seamlessly integrate Oracle Database's** performance, reliability, and scalability with Google Cloud's powerful analytics and AI tools to help process and analyze massive datasets

AI-enable your Oracle Database workloads

Actinver

Now able to provide enhanced services like **innovative financial solutions to its clients** by combining the security and performance of Oracle Database with Google Cloud AI tools

Understand your customer, with accelerated insights

Proprietary + Confidential

Google Cloud

Supported by the same secure Google infrastructure and global network trusted by billions of people

- Privacy for all of your data
- Security and compliance certifications
- Data governance and privacy
- Data residency and sovereignty

Oracle and Google Cloud partnership

Oracle and Google Cloud’s partnership supports multiple journeys for your business needs.

Transform

- Combines Google Cloud's AI/analytics with Oracle's database expertise.
- Leverages data platform, Vertex AI, and Gemini models for faster insights and enterprise truth.

Minimize costs

- Accelerated application performance
- Platform reliability
- High security
- Leverages Google Cloud infrastructure

Migrate

- Run Oracle mission-critical applications and databases across Oracle and Google Cloud
- Offers flexible solutions and a unified experience

Proprietary + Confidential

02

The partnership

The partnership

Google Cloud ORACLE

- Google Cloud now an authorized cloud provider for Oracle Cloud services.
- Oracle Cloud services available within the Google Cloud environment.
- Guide for Google sales/licensing specialists on Oracle products, licensing, and customer pain points.

Google + Oracle Partnership Offers

Flexible Deployment Options, including Oracle on Compute Engine (Compute Engine/GKE)

Easily migrate and run your Oracle database and applications on high- performance, reliable Google Cloud infrastructure – **availability: now**

Oracle Database@ Google Cloud

Deploy the latest Oracle database services such as Autonomous Database and RAC in a Google Cloud data center running on Oracle Cloud Infrastructure (OCI) Exadata hardware – **availability: now**

Oracle Cloud Infrastructure and Google Cross-Cloud Interconnect

Deploy workloads across both Oracle Cloud Infrastructure (OCI) and Google Cloud regions with no cross-cloud data transfer charges – **availability: now**

Proprietary + Confidential

Oracle + Google offers

01 Flexible Deployment Options (including Compute Engine/GKE)

Customer Apps and Oracle DB Running on Compute Engine and GKE or Running Oracle DB

Google Cloud
- Custom and ISV Applications
- Oracle DB on Compute Engine / GKE
- Oracle Applications

02 Oracle Database @Google Cloud

Customer Apps Running on Google Cloud While Connecting to Oracle DB in Google Cloud Data Center

Google Cloud
Google Cloud Console and Marketplace Integration
- Custom and ISV Applications
- Oracle Applications

↔ Google Cloud
Oracle Database SKUs (OCI in Google DC)

03 OCI and Google Cross-Cloud Interconnect

Customers have options to use resources from both Google Cloud and Oracle

Google Cloud Console Integration
- Custom and ISV Applications
- Oracle Applications

↔ ORACLE
Cloud Infrastructure

Proprietary + Confidential

Flexible deployment options on Compute Engine and Google Kubernetes Engine

Run mission-critical applications on Compute Engine and GKE, offering a highly-secure and extremely reliable infrastructure.

- Unifies cloud experience for applications
- Enables efficiency and innovation
- Helps streamline operations and reduces costs
- Provides storage flexibility with options

Available in all regions

Oracle Database@Google Cloud

Run mission-critical Oracle workloads in Google Cloud

Exadata Database Service

Run your most critical applications

Run Oracle Exadata in Google Cloud with all of the power you're used to.

Enhance your Database with 23ai

Take advantage of Oracle's vector search capabilities introduced in Oracle Database 23ai to power your AI applications.

Industry-leading automation

Take advantage of automation to deploy and managed databases running on Exadata.

Oracle Autonomous Database

Fully managed solution

Focus on application development and get started quickly and easily.

Run any workload

Autonomous Database supports data warehouse, transaction processing, JSON, and APEX workloads.

Scale with your business

Start with a small configuration and effortlessly scale up as your requirements change.

Proprietary + Confidential

Partnership strengthens Oracle workloads for Google Cloud

Operational Platforms

- Oracle Database disaster recovery
- ERP legacy or relegatory archives
- Dev, train, and test for ISV/ERP apps, Oracle Database upgrades
- Oracle Java Applications, MySQL

Data Insight and Analytics

- Enterprise data warehouses (Exadata or not)
- Custom applications built on an Oracle Database
- Goldengate pipelines and Oracle Database operational datastores
- Oracle Business Intelligence deployments

Enterprise Applications

- E-Business Suite
- JD Edwards EnterpriseOne
- PeopleSoft Enterprise
- Hyperion Financial Mng
- Retail Merchandising
- Non-Oracle Applications that are certified on the Oracle Database

Oracle Database@Google Cloud regional availability

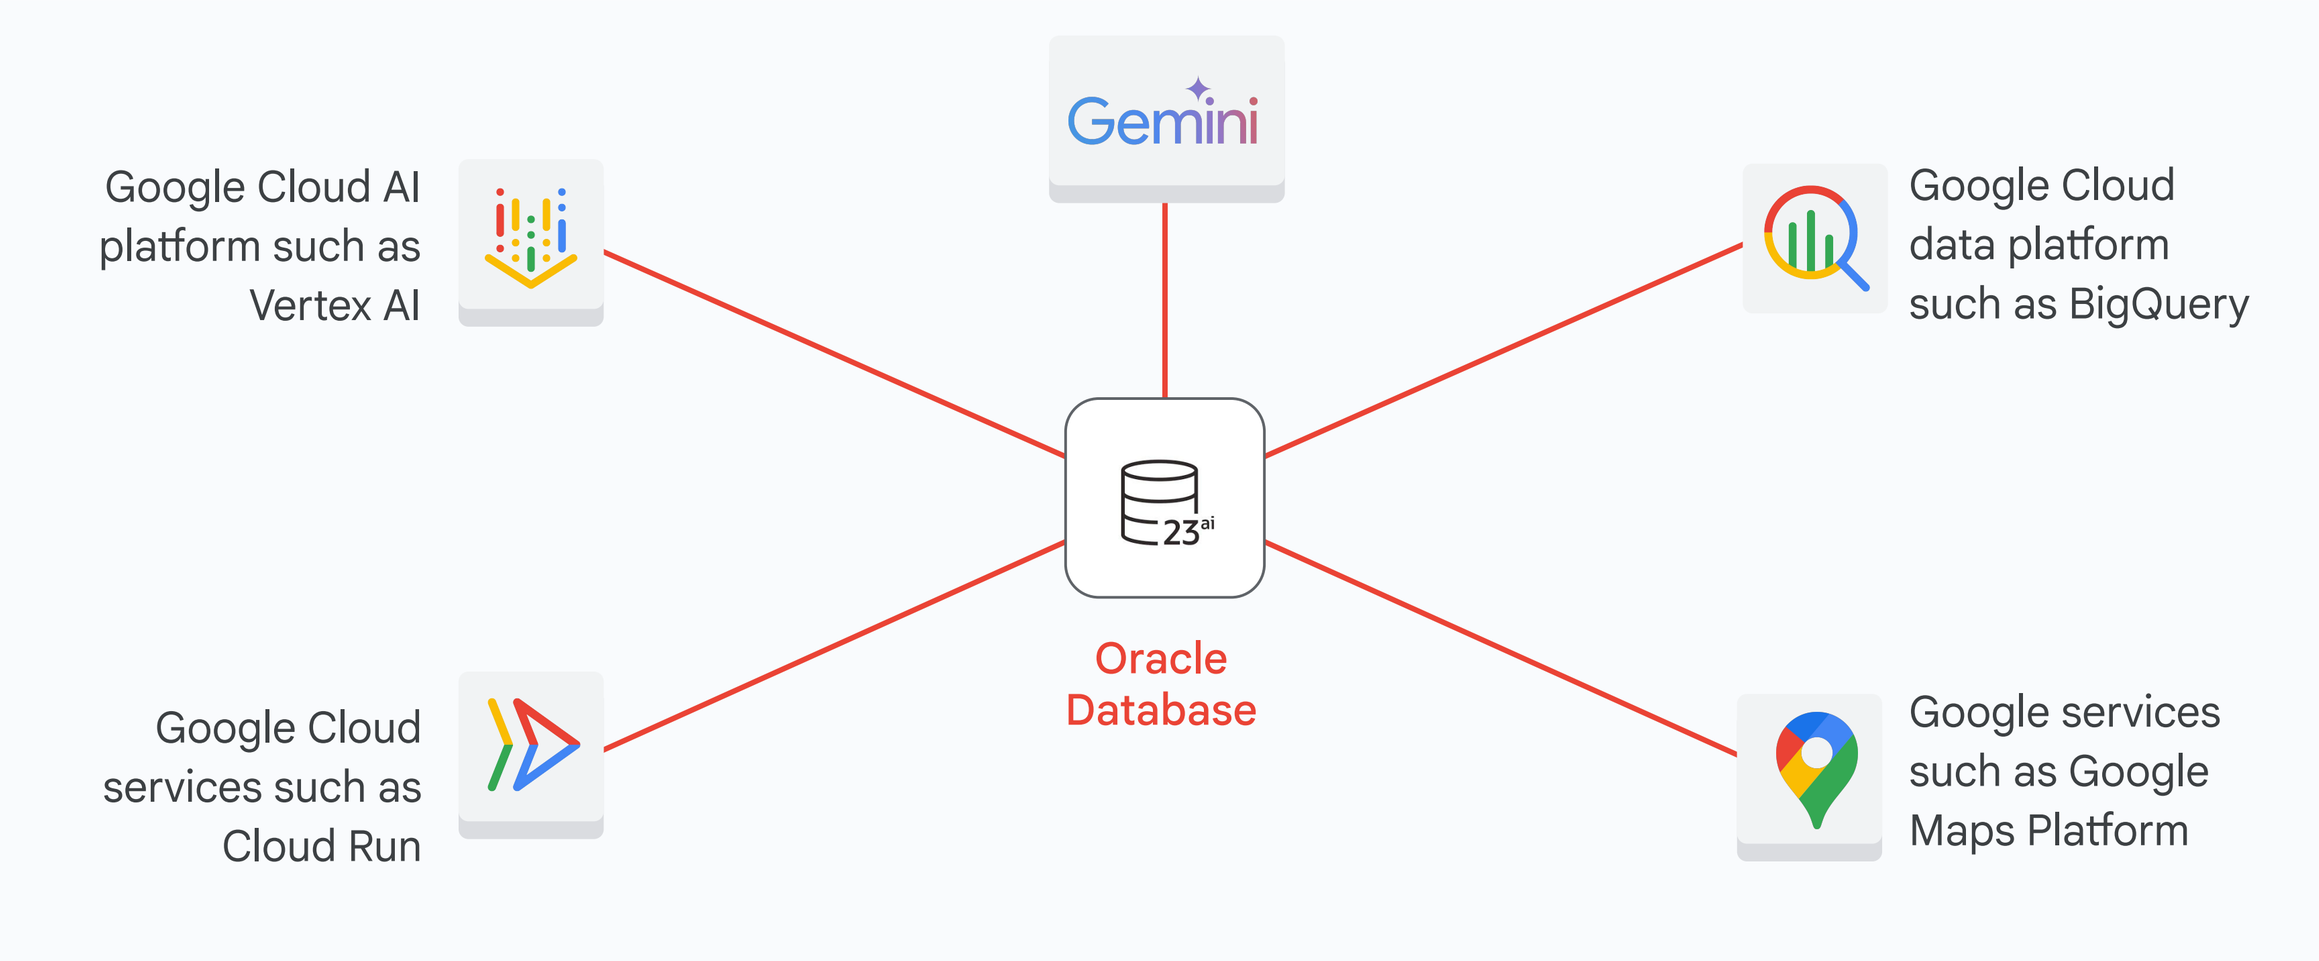
Google Cloud and Oracle – endless possibilities

Google ecosystem



Proprietary + Confidential

Connect applications and services with OCI and Cross-Cloud Interconnect

Connect Google Cloud and Oracle Cloud Infrastructure over a low latency, secure, and integrated interconnect—without incurring cross-cloud data transfer charges.

- Smooth, multi-cloud experience
- Low latency between OCI & Google Cloud
- Zero-cost data transfers charges
- On-demand virtual connections
- Streamlined support, alerts, & monitoring

Available in 11 regions

Google Agentspace

Redefines

Google Agentspace redefines how work gets done with a unified platform and interface.

Unifies

Agentspace unifies fragmented systems into a single platform.

Integrates

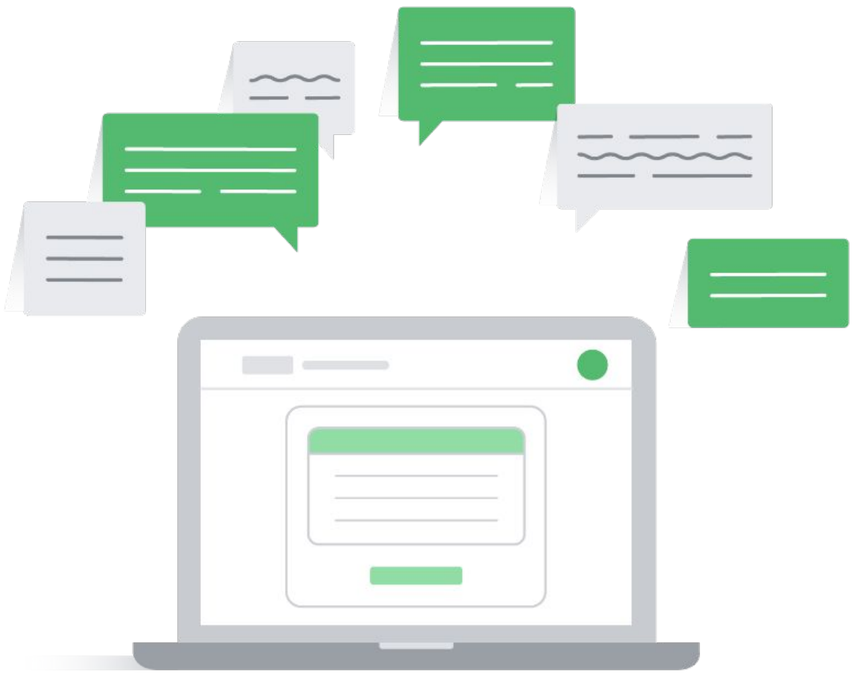
It integrates search, AI, and agents to help you find, comprehend, and act on enterprise data.

Connects

Built on Google's secure-by-design infrastructure, it connects to over 100 enterprise applications.

Proprietary + Confidential

Google Agentspace

It allows you to:


- Generate meaningful insights across all enterprise data sources.
- Query using SQL, natural language, or a combination of both
- Unifies access and insights across various data sources without data movement.
